Average Patient Age: 51.54 Years

Most Common Disease: Arthritis

Average Treatment Cost: 25544.31

Recovery Rate: 33.35%

Recommendations

1. Allocate more doctors and resources to departments treating the most common diseases.
2. Monitor patients with longer hospital stays to improve recovery and reduce treatment costs.
3. Improve treatment plans for patients with abnormal or inconclusive test results.
4. Plan medicine inventory based on disease frequency to avoid shortages.
5. Continue using data-driven analysis to improve patient care, hospital efficiency, and resource planning.
